

VALUE PROPOSITION · v2

# Dashboard OS

Your business operating system.

One platform for appointments, clients, team, finance,  
inventory and online bookings — with built-in AI.

**The promise:** replace 4–6 separate tools with a single platform, in your customer's language, with AI assistance over real data — at a fraction of the combined cost.

Confidential document · May 2026

# The problem we solve

---

Today, a service-based business — a salon, an aesthetic clinic, a spa, a doctor's office, a studio — needs to orchestrate 6 critical functions (scheduling, CRM, finance, inventory, marketing, payments) that almost always live in separate apps. The result:

- **Fragmented data:** the appointment doesn't update stock, the payment doesn't hit cash closing, the client gets miswritten in the CRM.
- **Double manual data entry:** the owner or receptionist wastes hours moving info between systems.
- **Stacked costs:** 4–6 SaaS subscriptions easily reach USD 80–200/month for a small business.
- **No visibility:** no one knows which service is the most profitable, which professional retains the most clients, or what each appointment really costs.
- **Languages and markets:** most tools are English-only or Spanish-only, blocking expansion.

## Our solution

---

**Dashboard OS** is a modular SaaS that integrates the 10 critical modules into a single multilingual platform (ES / EN), with shared real-time data, an AI copilot and a public booking portal per business.

### Four pillars that set us apart

#### 1. One interface for everything

Schedule, clients, services, team, finance, inventory, workflows, automations, online bookings and settings. Each module is toggled per business. The data is the same everywhere.

#### 2. Multilingual from day one

The whole app switches between Spanish and English with a click — including the booking page your clients see. Ready for LatAm and international expansion.

#### 3. AI over real data

An integrated copilot answers questions and generates reports / widgets from your real data: revenue per professional, month-over-month, inventory alerts, pricing recommendations.

#### 4. Granular roles and permissions

RBAC v2 system: each user only sees what their role allows. The cashier sees cash but not finance; the professional sees their appointments but not others'; the owner sees everything.

# Why it matters, by reader

|                                |                                                                                                                                                                                                                             |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>For the business owner</b>  | A single subscription replaces 4–6 tools. Full visibility in one panel. Decisions based on real data, not guesswork. 24/7 online bookings even when the business is closed.                                                 |
| <b>For investors</b>           | Massive PyME market (millions of service businesses). Horizontal product with vertical depth (per-industry templates). Modern stack, low ops cost. AI as a retention engine. Recurring SaaS model with multi-branch upsell. |
| <b>For partners / agencies</b> | White-label friendly: brand, color and domain configurable per business. Extensible workflows enable implementation + recurring support revenue. Referral commissions possible. Two-language documentation out of the box.  |

# Product scope

Dashboard OS is designed for service businesses with appointments. We currently cover the following verticals in depth:

- **Beauty salons and barbershops** — the core use case.
- **Aesthetic and dermatology clinics** — with before/after photos and clinical notes.
- **Spas and wellness centers** — schedule with room blocks.
- **Independent practitioners and small offices** — multi-professional.
- **Workshops and custom service studios** — extensible via workflows.

## System capabilities

|                                |                                                                          |
|--------------------------------|--------------------------------------------------------------------------|
| <b>Multi-branch</b>            | Natively supported with per-branch inventory and cash.                   |
| <b>Multi-user</b>              | Configurable roles and permissions (RBAC v2).                            |
| <b>Multi-language</b>          | Spanish and English. Architecture ready for more languages.              |
| <b>Multi-device</b>            | Installable PWA on mobile, tablet and desktop with auto-update.          |
| <b>Capacity per instance</b>   | Tens of thousands of appointments and clients per business (PostgreSQL). |
| <b>Backups &amp; migration</b> | Versioned schema with Prisma. Google Sheets export.                      |

# Highlight features

A (non-exhaustive) list of what's available today:

|                                     |                                                                                                                                                    |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Smart dashboard</b>              | Drag-and-drop configurable widgets with real-time KPIs. Floating AI copilot that builds widgets from natural language.                             |
| <b>Pro schedule</b>                 | Day/week/month and per-professional view. Drag-and-drop. Appointment statuses. Schedule blocks. WhatsApp message and email confirmation generator. |
| <b>CRM with clinical record</b>     | Per-client history, before/after photos per appointment, clinical notes, automatic segmentation (VIP, active, inactive, new).                      |
| <b>Online bookings per business</b> | Branded public URL (/booking/your-business). 4-step flow, multilingual, with optional deposit paid at booking time.                                |
| <b>Financial ERP</b>                | Daily cash closing, bank reconciliation, salary and commission settlement, profitability per service and professional, audit trail, simulator.     |
| <b>Inventory ERP</b>                | FIFO batch traceability, multi-branch, per-service consumption rules, barcode scanner, purchase orders, AI insights.                               |
| <b>Visual workflows</b>             | Zapier-like builder with system triggers (confirmed appointment, low stock, etc.) and actions (email, WhatsApp, update data). Auditable logs.      |
| <b>Integrations</b>                 | WhatsApp Business, SMTP (Gmail/Outlook), Google Calendar, Stripe, Mercado Pago, Instagram Shop, Google Sheets. More coming.                        |
| <b>Roles and permissions</b>        | RBAC v2: define exactly what each user can see and change. Granular access to finance and settings.                                                |
| <b>Deep customization</b>           | Dynamic fields per entity, templates per business model, own brand and colors, toggleable modules.                                                 |

# Available integrations

The system is already connected to the most used services by service businesses:

|               |                                                                      |
|---------------|----------------------------------------------------------------------|
| Communication | WhatsApp Business, SMTP (Gmail/Outlook), transactional Nodemailer.   |
| Calendar      | Google Calendar (two-way sync).                                      |
| Payments      | Stripe (international), Mercado Pago (LatAm), deposit at booking.    |
| Marketing     | Instagram Shop (DMs + booking button), Meta Ads Pixel (conversions). |
| Productivity  | Google Sheets (two-way import/export of clients and appointments).   |
| AI            | OpenAI (reports, suggestions, widget generation).                    |
| Coming soon   | TikTok Bookings, PWA push notifications, scheduled email reports.    |

# Plans (illustrative)

Three plans designed to grow with the business. Prices are illustrative and tuned per target market.

| Individual                                                                                                                                              | Professional                                                                                                                                                                                        | Business                                                                                                                                                                                                                   |
|---------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <div>USD 5</div> <div>per month</div> <div>✓ 1 user</div> <div>✓ Schedule + Clients</div> <div>✓ Basic online bookings</div> <div>✓ Email support</div> | <div>USD 7</div> <div>per month, per user</div> <div>✓ Up to 3 users</div> <div>✓ All modules</div> <div>✓ WhatsApp + integrations</div> <div>✓ AI copilot included</div> <div>✓ Multi-branch</div> | <div>USD 10</div> <div>per month, per user</div> <div>✓ Unlimited users</div> <div>✓ Everything in Professional</div> <div>✓ Priority support</div> <div>✓ Assisted onboarding</div> <div>✓ API and custom workflows</div> |

# A typical use case

---

Aura Studio, a salon with 4 professionals and 1 receptionist, used to run on Calendly (schedule), Excel (cash), a WhatsApp group (clients) and a Google Sheets file (inventory). They were paying ~USD 95/month in combined subscriptions and losing ~6 hours a week to double data entry.

With Dashboard OS they moved to:

- **One platform** for all 5 users — USD 28/month (Pro plan × 4 users).
- **24/7 online bookings** with Mercado Pago deposit: bookings up by 28%.
- **Automated reminders**: no-show rate dropped from 14% to 5%.
- **Daily cash closing in 5 minutes**, without Excel.
- **Financial visibility**: discovered their top-billing service was the least profitable. They repriced it.

# Competitive advantage

---

- **Vertical depth**: designed for appointment-based service businesses, not 'everyone'.
- **Native multilingual**: few competitors offer ES / EN in the same product without overhead.
- **AI tied to real data**: not a decorative chatbot — it operates on the business's data.
- **Low ops cost**: modern stack, Vercel + Railway deployment, no heavy licenses.
- **Extensible architecture**: dynamic fields + workflows + templates enable new verticals without rewriting code.
- **Granular permissions**: a must-have for serious businesses. Many competitors still ship only 'admin/user'.

# Where we're heading

---

The product moves along three simultaneous axes: deepening verticals, expanding communication and monetization channels, and deepening the AI experience.

## Next 3 months

Native WhatsApp Business API · Online payments with deposit in public booking (full Stripe + MP) · PWA push notifications · Templates for tattoo artists and dentists.

## Next 6 months

TikTok / Instagram booking buttons · Workflow marketplace · Scheduled email reports · Loyalty system with points.

## 12+ months vision

Cross-business service marketplace · AI agent that runs the schedule and answers clients 24/7 · More languages (PT, FR).

# Next step

---

Dashboard OS is already live, with the architecture to grow and the depth to replace the current stack of a service business. The conversation continues here:

- **For businesses:** personalized 20-min demo on your vertical.
- **For investors:** full pitch deck + access to product metrics.
- **For partners:** referral and co-implementation program.
